

Asphalt Curb

1. Lay out and mark all areas of repair or new installation.
2. Excavate as necessary to prepare for installation. Cut existing adjoining curbs if needed to provide vertical edges.
3. Clean the areas and dispose of all debris offsite.
4. Mechanically apply liquid asphalt tack coat to existing asphalt surface to receive curbs.
5. Install curb using extrusion machine or by hand methods.
6. Backfill curbs, if specified, using onsite materials.
